Child Restraint Systems for Installation Checks

Top pick list

From 2013 onwards, Euro NCAP uses a selection of popular Child Restraint Systems (CRS) to assess the vehicle's ability to safely and correctly accommodate child seats. This so called top pick list contains a sample of widely available, well performing child seats that represent most common types of products available on the European market. The list will be checked annually and updated if seats are no longer available on the market. Each update will occur at the start of the year preceding the year of application.

Euro NCAP does not assess or rate the child seats individually and although the child restraint systems on the top pick list are generally recommended, there are other seats available on the market that provide equal protection.

Child Restraint Systems for Dynamic Testing

Q6 Dummy

Where the vehicle manufacturer does not recommend a CRS for a six year old child, the front ODB and Side MDB impacts will be performed with the Q6 dummy seated in a booster seat selected from the top pick list. This CRS will be the **Britax Römer Kidfix XP** installed using the ISOFIX anchorages and adult belt. Where the vehicle offers no ISOFIX anchorages, it will be installed using the adult belt only. The CRS height adjustment shall be set to the 4th notch up from the bottom, where the lowest position is notch 1.

Q10 Dummy

Where the vehicle manufacturer does not recommend a CRS for a ten year old child, the front ODB and Side MDB impacts will be performed with the Q10 dummy seated on a booster cushion (only) selected from the list below by the vehicle manufacturer, where no selection is made the Secretariat will choose at random.
