

Ford Explorer Standard Safety Equipment

SPECIFICATION

Tested Model	Ford Explorer Plug-in Hybrid, LHD
Body Type	- 5 door SUV
Year Of Publication	2019
Kerb Weight	2518kg
VIN From Which Rating Applies	- all Ford Explorers
Class	Large Off-Road

SAFETY EQUIPMENT

	Driver	Passenger	Rear
FRONTAL CRASH PROTECTION			
Frontal airbag	٠	•	×
Belt pretensioner	٠	•	٠
Belt loadlimiter	٠	•	٠
Knee airbag	×	•	×
SIDE CRASH PROTECTION			
Side head airbag	٠	•	٠
Side chest airbag	٠	•	٠
Side pelvis airbag	٠		•

SAFETY EQUIPMENT (NEXT)

	Driver	Passenger	Rear
CHILD PROTECTION			
Isofix		×	٠
Integrated CRS		×	×
Airbag cut-off switch		•	
SAFETY ASSIST			
Seat Belt Reminder	•		۲

OTHER SYSTEMS	
Active Bonnet (Hood)	×
AEB Pedestrian	•
AEB Cyclist	
AEB City	•
AEB Inter-Urban	•
Speed Assistance System	•
Lane Assist System	

Note: Other equipment may be available on the vehicle but was not considered in the test year.

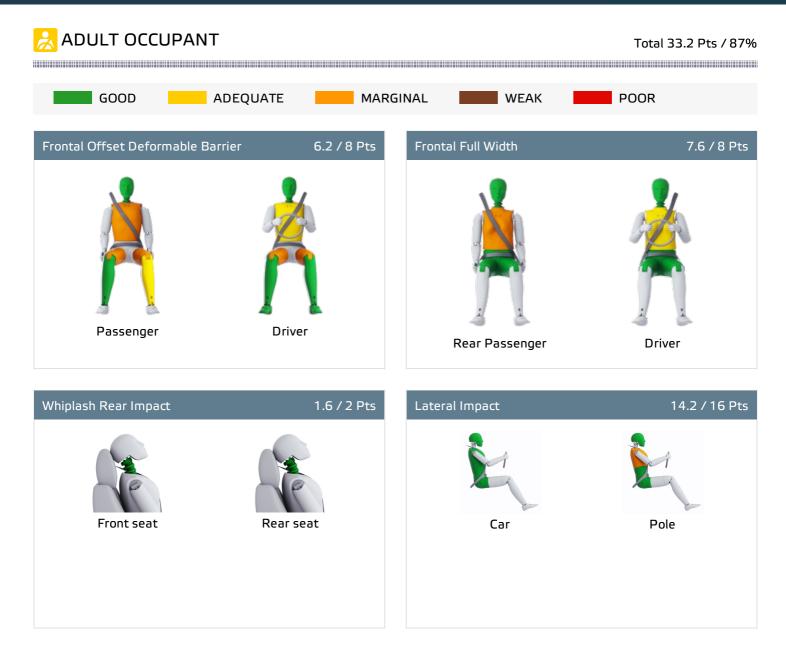

- Fitted to the vehicle as standard
- O Not fitted to the test vehicle but available as option or as part of the safety pack

<u> ADULT OCCUPANT</u>

Total 33.2 Pts / 87%

Comments

The passenger compartment of the Explorer remained stable in the frontal offset test. Dummy readings indicated good protection of the knees and femurs of the driver and passenger. However, a post-crash inspection revealed structures in the dashboard which might pose a hazard to the knees and femurs of occupants of different sizes and to those sitting in different positions. Accordingly, the score for this body region was penalised and protection was rated as marginal. In the full-width rigid barrier test, protection of all critical body regions was good or adequate, apart from the chest of the rear passenger. For this body area, dummy readings of chest compression indicated a marginal level of protection. In the side barrier impact, protection was good for all critical body areas and the Explorer scored maximum points. In the more severe side pole test, readings of rib compression indicated marginal protection against while protection of other critical body areas was good. Tests on the front seats and head restraints demonstrated good protection. The standard-fit autonomous emergency braking (AEB) system performed well in tests of its functionality at the low speeds, typical of city driving, at which many whiplash injuries occur, with collisions avoided or mitigated in every test scenario.

Restraint for 6 year old child: *Britax Römer KidFix XP* Restraint for 10 year old child: *Booster Cushion* Safety Features

Comments

In both the frontal offset test and the side barrier impact, protection of all critical body areas was good for both the 6-year and 10-year dummies, and the Explorer scored maximum points in this part of the assessment. The Explorer automatically disables the airbag is it detects a rearward-facing child restraint in the front passenger seat. The system worked robustly in Euro NCAP's tests and was duly rewarded. Child restraints could be properly installed and accommodated in the front passenger seat and in the second row. The optional third-row seats are equipped with ISOFIX/i-Size anchorages. However, issues were found during checks of CRS installation in these seats.

7.4 / 12 Pts
Pre-Collision Assist with AEB
Auto-Brake with Forward Collision Warning
5 km/h

Comments

The bonnet provided predominantly good or adequate protection to the head of a struck pedestrian, with poor values recorded at the edge of the bonnet surface. The bumper offered good or adequate protection to pedestrians' legs at all test locations. Protection of the pelvis was mixed, with some areas of good protection and some areas that were poor. The Explorer's AEB system can detect vulnerable road users like pedestrians and cyclists, as well as other vehicles. In tests of its response to pedestrians, the system performed well, with collisions avoided or mitigated in most situations. The system showed a marginal level of performance in the more challenging cyclist tests.

Operational From	8 km/h
Additional Information	Supplementary warning

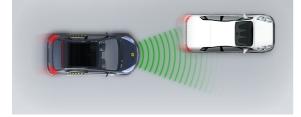

Comments

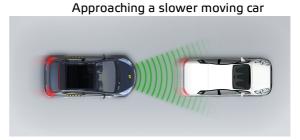

The AEB system performed well in tests of its response to other vehicles at highway speeds. The Explorer has an intelligent speed assistance system. Digital mapping is used in conjunction with a camera to determine the local speed limit. This information is presented to the driver and the the speed limiter is adapted accordingly. A lane support system helps to avoid inadvertent drifting out of lane by warning the driver and gently applying corrective steering. A seatbelt reminder is standard for all seats.
