## TEST RESULTS

## Land Rover Range Rover Standard Safety Equipment

2022

## SPECIFICATION

Tested Model	Range Rover D300 SE, RHD
Body Type	- 5 door SUV
Year Of Publication	2022
Kerb Weight	2524kg
VIN From Which Rating Applies	- all Range Rovers
Class	Large Off-Road

## SAFETY EQUIPMENT

	Driver	Passenger	Rear

#### Rear Impact

Front Seat

#### Comments

The passenger compartment of the Range Rover remained stable in the frontal offset test. Dummy readings indicated good protection of the knees and femurs of both the driver and passenger. However, Land Rover did not provide evidence to demonstrate that a similar level of protection would be provided to occupants of different sizes and to those sitting in different positions, and the score for this body region was penalised. Analysis of the deceleration of the impact trolley during the test, and analysis of the deformable barrier after the test, revealed that the Range Rover would be an aggressive impact partner in a frontal collision, and the score was penalised accordingly. In the full-width rigid barrier test, protection of the chest of the rear passenger was rated as marginal, based on dummy readings of compression. In both the side barrier impact and the more severe side pole impact, protection of all critical body areas was good and the Range Rover scored maximum points in this part of the assessment. Control of excursion (the extent to which a body is thrown to the other side of the vehicle when it is hit from the far side) was found to be adequate. The Range Rover has no counter-measure to mitigate against occupant to occupant injuries in such impacts. Tests on the front seats and head restraints demonstrated good protection against whiplash injuries in the event of a rear-end collision. A geometric analysis of the rear seats also indicated good whiplash protection. The Range Rover has an advanced eCall system which alerts the emergency services in the event of a crash and a 'Post-Crash Braking' system which automatically applies the brakes to prevent secondary collisions.

Restraint for 6 year old child: *Britax Römer Kidfix M i-Size OEM with Secure Guard* Restraint for 10 year old child: *Britax Römer Kidfix M i-Size OEM (CRS Seatback and Secure Guard removed*)

#### Comments

The Range Rover provided good protection for all critical body regions of both the 6 and 10 year dummies in the frontal offset and side barrier tests, and scored maximum points in this part of the assessment. The front passenger airbag can be disabled to allow a rearward-facing child restraint to be used in that seating position. All of the child restraint types for which the Range Rover is designed could be properly installed and accommodated.

#### Vulnerable Road Users

#### 14.7 / 18 Pts

System Name	Emergency Braking
Туре	Auto-Brake with Forward Collision Warning
Operational From	5 km/h

## K VULNERABLE ROAD USERS

Total 39.1 Pts / 72%

# AEB Pedestrian 6.8 / 9 Pts

#### Day time

Vehicle reversing into standing pedestrian

Adult crossing the road

Adult along the roadside

#### Night time

Adult along the roadside

Child running from behind parked vehicles

## K VULNERABLE ROAD USERS

Total 39.1 Pts / 72%

# AEB Cyclist 7.9 / 9 Pts

#### Comments

Protection of the head of a struck pedestrian was predominantly good or adequate. The bumper offered good protection to pedestrians' legs at all test locations but protection of the pelvis predominantly poor. The autonomous emergency braking (AEB) system of the Range Rover can respond to vulnerable road users as well as to other vehicles. The system performed well in tests of its response to pedestrians and cyclists, with collisions avoided in most test scenarios.

## 🛜 SAFETY ASSIST

Total 13.2 Pts / 82%

#### Comments

The Range Rover's autonomous emergency braking (AEB) system performed well in tests of its reaction to other vehicles. A seatbelt reminder system is fitted as standard to the front and rear seats and the car is equipped with a system to detect driver fatigue. The lane support system gently corrects the vehicle's path if it is drifting out of lane, and also intervenes in some more critical situations. A speed assistance system detects the local speed limit and the driver can choose to set the limiter or let the system do so automatically.
