## SPECIFICATION

Tested Model	Range Rover Sport 3.0 Petrol PHEV 'SE', RHD
Body Type	- 5 door SUV
Year Of Publication	2022
Kerb Weight	2727kg
VIN From Which Rating Applies	- all MY23 Range Rover Sports
Class	Large Off-Road

### General comments

The Range Rover Sport shares much in common with the Range Rover. Where necessary, additional tests have been performed on the PHEV variant of the Range Rover Sport but some tests are carried over from the Range Rover.

## Comments

The passenger compartment of the Range Rover Sport remained stable in the frontal offset test. Dummy readings indicated good protection of the knees and femurs of both the driver and passenger. However, Land Rover did not provide evidence to demonstrate that a similar level of protection would be provided to occupants of different sizes and to those sitting in different positions, and the score for this body region was penalised. Analysis of the deceleration of the impact trolley during the test, and analysis of the deformable barrier after the test, revealed that the Range Rover Sport would be an aggressive impact partner in a frontal collision, and the score was penalised accordingly. In the full-width rigid barrier test, protection of the chest of the rear passenger was rated as marginal, based on dummy readings of compression. In both the side barrier impact and the more severe side pole impact, protection of all critical body areas was good and the Range Rover Sport scored maximum points in this part of the assessment. Control of excursion (the extent to which a body is thrown to the other side of the vehicle when it is hit from the far side) was found to be adequate. The Range Rover Sport has no counter-measure to mitigate against occupant to occupant injuries in such impacts. Tests on the front seats and head restraints demonstrated good protection against whiplash injuries in the event of a rear-end collision. A geometric analysis of the rear seats also indicated good whiplash protection. The Range Rover Sport has an advanced eCall system which alerts the emergency services in the event of a crash and a 'Post-Crash Braking' system which automatically applies the brakes to prevent secondary collisions.

## Comments

The Range Rover Sport provided good protection for all critical body regions of both the 6 and 10 year dummies in the frontal offset and side barrier tests, and scored maximum points in this part of the assessment. The front passenger airbag can be disabled to allow a rearward-facing child restraint to be used in that seating position. All of the child restraint types for which the Range Rover Sport is designed could be properly installed and accommodated.

VULNERABLE ROAD USERS

## AEB Cyclist

7.9 / 9 Pts

Cyclist from nearside, obstructed view

Approaching a crossing cyclist

Cyclist along the roadside

## Comments

Protection of the head of a struck pedestrian was predominantly good or adequate. The bumper offered good protection to pedestrians' legs at all test locations but protection of the pelvis was mixed. The autonomous emergency braking (AEB) system of the Range Rover Sport can respond to vulnerable road users as well as to other vehicles. The system performed well in tests of its response to pedestrians and cyclists, with collisions avoided in most test scenarios.

Comments

The Range Rover Sport's autonomous emergency braking (AEB) system performed well in tests of its reaction to other vehicles. A seatbelt reminder system is fitted as standard to the front and rear seats and the car is equipped with a system to detect driver fatigue. The lane support system gently corrects the vehicle's path if it is drifting out of lane, and also intervenes in some more critical situations. A speed assistance system detects the local speed limit and the driver can choose to set the limiter or let the system do so automatically.
