Comments

The passenger compartment remained stable in the frontal offset test. Dummy readings indicated good protection of the knees and femurs of the driver and passenger. Kia showed that a similar level of protection would be provided to occupants of different sizes and to those sat in different positions. In the full-width frontal impact, protection of the driver was good or adequate. However, protection of the rear seat occupant was rated as weak for the chest and poor for the pelvis. Dummy readings indicated that the pelvis had slipped under the seatbelt instead of being properly restrained by it. In the side barrier and more severe side pole impact, the Niro scored maximum points, with good protection of all critical body areas. Tests showed good protection from the front seats and head restraints against whiplash injuries in the event of a rear-end collision. A geometric assessment of the rear seats indicated marginal protection. Additional whiplash protection is available from the optional 'Advanced Driving Assistance Pack' which contains an autonomous emergency braking system which operates at the low speeds typical of city driving. The system performed well in Euro NCAP's tests

Comments

In the frontal test, protection of the 10 year dummy was good apart from the neck, protection of which was adequate. Readings from the 6 year dummy indicated weak chest protection and a marginal level of neck protection. In the side impact, protection of both child dummies was good and the Niro scored maximum points. The front passenger airbag can be disabled to allow a rearward-facing child restraint to be used in that seating position. Clear information is provided to the driver regarding the status of the airbag and the system was rewarded. All of the child restraints for which the Niro is designed could be properly installed and accommodated apart from the Universal Group I and Group II/III restraints in the rear centre seat.

Walking Adult crossing from Nearside -75%	Collision avoided up to 60 km/h	
Running Child from behind parked vehicles	Collision avoided up to 40 km/h	Impact mitigated up to 60 km/h

Comments

The bonnet provided predominantly good or adequate protection against head injuries, with poor results recorded along the edges and on the stiff windscreen pillars. The bumper provided good protection to pedestrians' legs at all test points. Protection of the pelvis was mostly good, although poor results were recorded at the outer edges. The 'Advanced Driving Assistance Pack' includes an autonomous emergency braking system which can detect pedestrians. The system performed well in Euro NCAP's tests, impact being avoided in many scenarios and mitigated in others.

Car in front brakes gently	Avoidance	Avoidance
Car in front brakes harshly	Mitigation	Mitigation
FOLLOWING A CAR AT LONG DISTANCE		
Car in front brakes gently	Avoidance	Avoidance
Car in front brakes harshly	Avoidance	Avoidance

Comments

The Niro has a standard seatbelt reminder for the front and rear seats. A driver-set speed limiter is also standard, together with a lane assistance system that warns the driver when the car is drifting out of lane and gently steers the car away from the lane marker. The autonomous emergency braking system operates at highway speeds and performed well in tests with impacts being avoided in several scenarios and the impact speed reduced in others.
