RATINGS EXPLAINED

To influence purchasing decisions for safer van choices, Euro NCAP annually conducts a series of ADAS tests on the best-selling commercial vans on the European market. Combined, these vans cover about 98 percent of the new van sales and represent the European situation well.

The fitment of each system on each van is confirmed with the vehicle manufacturer and data are consolidated by Euro NCAP for each market in EU27 plus Norway and the UK. The availability (standard, optional or not available) is presented in a graphical format with a corresponding table for each van, system and market respectively on the [Euro NCAP website](#).

Available ADAS systems (whether offered as optional or standard) on each commercial van are tested using the Euro NCAP Safety Assist protocols, adapted to **commercial vans** where needed. Each van is carrying half of its permissible loading mass, a typical load for a commercial van in daily use. In addition to ADAS, a Seat Belt Reminder check is carried out for each van.

The test scores of each system were weighted and combined into an overall score for each van. This weighted overall performance score places each van tested in one of the following categories: Platinum, Gold, Silver, Bronze, or Not Recommended (see legend).
