Comments

The passenger compartment of the Kia EV4 remained stable in the frontal offset test. Dummy readings indicated good protection of the knees and femurs of both the driver and the front seat passenger. Kia showed that a similar level of protection would be provided to occupants of different sizes and to those sitting in different positions. There was insufficient pressure in the airbag to prevent the driver's head from 'bottoming out' onto the steering wheel. Dummy readings did indicate excessive decelerations but a penalty was applied and protection rated as adequate. Analysis of the deceleration of the impact trolley during the test, and analysis of the deformable barrier after the test, revealed that the Kia EV4 would be a moderately benign impact partner in a frontal collision. In the full-width rigid barrier test, protection was good for all critical body regions of both the driver and the rear seat passenger. In both the side barrier test and the more severe side pole impact, good protection was provided to all critical body areas and the Kia EV4 scored maximum points in this part of the assessment. Control of excursion (the extent to which a body is thrown to the other side of the vehicle when it is hit from the far side) was found to be marginal. The Kia EV4 has a countermeasure to mitigate against occupant-to-occupant injuries in such impacts. In Euro NCAP's test there was a slight contact between the occupants and a penalty was applied. Tests on the front seats and head restraints demonstrated good protection against whiplash injuries in the event of a rear-end collision. However, a geometric analysis of the rear seats indicated marginal whiplash protection. The car has an advanced eCall system which alerts the emergency services in the event of a crash, and a system to prevent secondary impacts after the car has been in a collision. Kia demonstrated that the doors and windows would be openable to allow occupants to escape in the event of vehicle submergence.

Comments

In the frontal offset test, protection of the 6 year dummy was good for all critical body areas and good or adequate for the 10 year dummy. In the side barrier impact, protection of all critical parts of the body was good for both the 6 and 10 year dummies. The front passenger airbag can be disabled to allow a rearward-facing child restraint to be used in that seating position. Clear information is provided to the driver regarding the status of the airbag and the system was rewarded. The Kia EV4 is equipped with a direct 'child presence detection' system, which issues a warning when it detects that a child or infant has been left in the car. However, Kia's demonstration of the sensing capabilities of the system did not meet Euro NCAP's requirements and points were not awarded. All of the child restraint types for which the Kia EV4 is designed could be properly installed and accommodated in the car.

Lane Support Motorcyclist 2.0 / 3 Pts

Scenario	Day time
Changing lane across the path of an oncoming motorcyclist	
Changing lane across the path of an overtaking motorcyclist	

Comments

Protection of the head of a struck pedestrian or cyclist was largely good or adequate, with poor results recorded on the stiff windscreen pillars and at the base and top of the screen. Protection of the pelvis was good or adequate at all test locations. Protection of the femur and that of the knee and tibia was good at all test locations. The autonomous emergency braking system of the Kia EV4 responds to vulnerable road users such as pedestrians and cyclists, as well as to other vehicles. In tests of its response to pedestrians, the system performed adequately, and includes protection for those to the rear of the car. Protection against 'dooring', where a door is opened into the path of a cyclist approaching from behind, is available as part of the 'DriveWise' safety pack, but was not included in this assessment. The system's response to motorcyclists was good.

Operational From	5 km/h
Sensor Used	camera and radar

Scenario	Autobrake function only	Driver reacts to warning
Approaching a car crossing a junction		
Approaching a car head-on		
Turning across the path of an oncoming car		
Approaching a stationary car		
Approaching a slower moving car		
Approaching a braking car		

Currently not tested

 SAFETY ASSIST

Total 12.2 Pts / 67%

Comments

Overall, the performance of the autonomous emergency braking (AEB) system was adequate in tests of its reaction to other vehicles. A seatbelt reminder system is fitted as standard to the front and rear seats. The car has a direct driver status monitoring system as standard, detecting driver fatigue and some types of distraction. The lane support system gently corrects the vehicle's path if it is drifting out of lane and also intervenes in some more critical situations. The speed assistance system identifies the local speed limit. The driver can choose to allow the limiter to be set automatically by the system.
