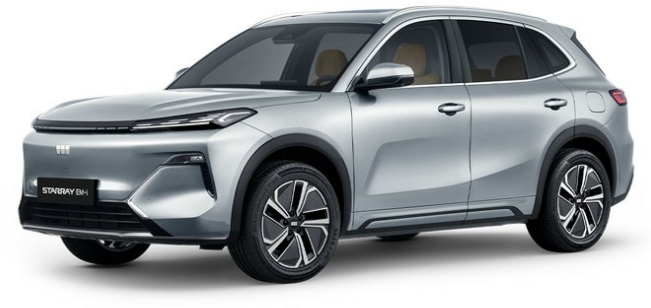
GEELY STARRAY EM-i

Standard Safety Equipment

2025



Adult Occupant: 90%

Child Occupant: 87%

Vulnerable Road Users: 86%

Safety Assist: 77%

SPECIFICATION

Tested Model	GEELY STARRAY EM-i 'Comfort', LHD
Body Type	- 5 door SUV
Year Of Publication	2025
Kerb Weight	1750kg
VIN From Which Rating Applies	- all STARRAY EM-i
Class	Small SUV

SAFETY EQUIPMENT

Submergence Check	Compliant

Comments

The passenger compartment of the GEELY STARRAY EM-i remained stable in the frontal offset test. Dummy readings indicated good protection of the knees and femurs of both the driver and the front seat passenger. GEELY showed that a similar level of protection would be provided to occupants of different sizes and to those sitting in different positions. Analysis of the deceleration of the impact trolley during the test, and analysis of the deformable barrier after the test, revealed that the GEELY STARRAY EM-i would be a moderately benign impact partner in a frontal collision. In the full-width rigid barrier test, protection was good or adequate for all critical body regions of the driver rear seat passenger. In the side barrier test, the GEELY STARRAY EM-i provided good protection to all critical body areas and scored maximum points. In the more severe side pole impact, protection was at least adequate for all critical body areas. Control of excursion (the extent to which a body is thrown to the other side of the vehicle when it is hit from the far side) was found to be adequate The GEELY STARRAY EM-i has a countermeasure to mitigate against occupant-to-occupant injuries in such impacts. The airbag performed well in Euro NCAP's tests with dummy readings indicating good protection for both the driver and passenger. Tests on the front seats and head restraints demonstrated good protection against whiplash injuries in the event of a rear-end collision. A geometric analysis of the rear seats also indicated good whiplash protection. The car has an advanced eCall system which alerts the emergency services in the event of a crash, and a system to prevent secondary impacts after the car has been in a collision. GEELY demonstrated that the doors and windows would be openable to allow occupants to escape in the event of vehicle submergence.

Comments

In both the frontal offset and the side barrier tests, protection was good for all critical body areas for the 6 and 10 year dummies, and the GEELY STARRAY EM-i scored maximum points in this part of the assessment. The front passenger airbag can be disabled to allow a rearward-facing child restraint to be used in that seating position. Clear information is provided to the driver regarding the status of the airbag and the system was rewarded. The GEELY STARRAY EM-i is equipped with a direct 'child presence detection' system, which issues a warning when it detects that a child or infant has been left in the car. The largest i-Size restraint, for children from 100 to 135cm, could not be properly installed in the front passenger seat owing to interference with the seat foam. Otherwise, all child restraint types for which the STARRAY EM-i is designed could be installed and accommodated.

VULNERABLE ROAD USERS

Type	Auto-Brake with Forward Collision Warning
Operational From	10 km/h

PERFORMANCE |

AEB Pedestrian

7.5 / 9 Pts

Scenario	Day time	Night time
Car reversing into adult or child		–
Adult crossing a road into which a car is turning		–
Adult crossing the road		
Child running from behind parked vehicles		
Adult along the roadside		

– Currently not tested

AEB Cyclist

7.4 / 8 Pts

Scenario	Day time
Approaching cyclist crossing from behind parked vehicles	
Turning across path of an oncoming cyclist	
Approaching a crossing cyclist	
Approaching a cyclist along the roadside	

VULNERABLE ROAD USERS

Total 54.4 Pts / 86%

GOOD ADEQUATE MARGINAL WEAK POOR

Cyclist Dooring Prevention

0.3 / 1 Pts

Scenario	
Dooring a passing cyclist	information, driver door only"

AEB Motorcyclist

6.0 / 6 Pts

Scenario	Autobrake function only	Driver reacts to warning
Approaching a stationary motorcyclist		
Approaching a braking motorcyclist		
Turn across the path of an oncoming motorcyclist		–

– Currently not tested

Lane Support Motorcyclist

2.5 / 3 Pts

Scenario	Day time
Changing lane across the path of an oncoming motorcyclist	
Changing lane across the path of an overtaking motorcyclist	

Comments

Protection of the head of a struck pedestrian or cyclist was largely good or adequate, with poor results recorded on the stiff windscreen pillars and at the base and top of the screen. Protection of the pelvis was good or adequate at all test locations. Protection of the femur and that of the knee and tibia was good at all test locations. The autonomous emergency braking system of the GEELY STARRAY EM-i responds to vulnerable road users such as pedestrians and cyclists, as well as to other vehicles. In tests of its response to pedestrians, the system performed well overall, with adequate protection for those to the rear of the car. The system performed well in tests of its reaction to cyclists, including some protection against 'dooring', where a door is opened into the path of a cyclist approaching from behind. The system's response to motorcyclists was good.

SAFETY ASSIST

AEB Car-to-Car

7.3 / 9 Pts

System Name	Autonomous Emergency Brake
Type	Autonomous emergency braking and forward collision warning
Operational From	4 km/h
Sensor Used	camera

Scenario	Autobrake function only	Driver reacts to warning
Approaching a car crossing a junction		
Approaching a car head-on		–
Turning across the path of an oncoming car		–
Approaching a stationary car		
Approaching a slower moving car		–
Approaching a braking car		–

– Currently not tested

SAFETY ASSIST

Total 14.0 Pts / 77%

Comments

Overall, the performance of the autonomous emergency braking (AEB) system was good in tests of its reaction to other vehicles. A seatbelt reminder system is fitted as standard to the front and rear seats. The car has a direct driver status monitoring system as standard, detecting driver fatigue and some types of distraction. The lane support system gently corrects the vehicle's path if it is drifting out of lane and also intervenes in some more critical situations. The speed assistance system identifies the local speed limit. The driver can choose to allow the limiter to be set automatically by the system.
