SPECIFICATION

Tested Model	Deepal S07, Base level, LHD
Body Type	- 5 door SUV
Year Of Publication	2024
Kerb Weight	2073kg
VIN From Which Rating Applies	- all Deepal S07s
Class	Small SUV

General comments

The Occupant Status Monitoring system of the Deepal S07 has been updated since it was originally tested in 2024. Detection of driver distraction can now be turned off permanently. Accordingly, that part of the system no longer meets Euro NCAP's requirements and the score for Safety Assist is reduced.

Comments

The passenger compartment of the Deepal S07 remained stable in the frontal offset test. Dummy readings indicated good protection of the knees and femurs of both the front seat occupants. Deepal demonstrated that a similar level of protection would also be provided to occupants of different sizes and to those sitting in different positions. Analysis of the deceleration of the impact trolley during the test, and analysis of the deformable barrier after the test, revealed that the Deepal S07 would be a benign impact partner in a frontal collision. In the full-width rigid barrier test, protection of all critical body areas was good or adequate, both for the driver and rear passenger. In both the side barrier test and the more severe side pole impact, protection of all critical body regions was good, and the S07 scored maximum points in this part of the assessment. Control of excursion (the extent to which a body is thrown to the other side of the vehicle when it is hit from the far side) was found to be marginal. The Deepal S07 has a countermeasure to mitigate against occupant-to-occupant injuries in such impacts. The airbag performed well in Euro NCAP's tests with dummy readings indicating good protection for both the driver and passenger. Tests on the front seats and head restraints demonstrated good protection against whiplash injuries in the event of a rear-end collision. A geometric analysis of the rear seats also indicated good whiplash protection. The car has an advanced eCall system which alerts the emergency services in the event of a crash, and a system to prevent secondary impacts after the car has been in a collision. Deepal demonstrated that the doors and windows would be openable to allow occupants to escape in the event of vehicle submergence.

Comments

In both the frontal offset test and the side barrier impact, protection of all critical parts of the body was good for the 6 and 10 year dummy, and the Deepal S07 scored maximum points in this part of the assessment. The front passenger airbag can be disabled to allow a rearward-facing child restraint to be used in that seating position. Clear information is provided to the driver regarding the status of the airbag, and the system was rewarded. The S07 is equipped with a direct 'child presence detection' system, which issues a warning when it detects that a child or infant has been left in the car. However, the system did not meet Euro NCAP's requirements and was not rewarded. All of the child restraint types for which the Deepal S07 is designed could be properly installed and accommodated in the car.

Lane Support Motorcyclist 2.0 / 3 Pts

Scenario	Day time
Changing lane across the path of an oncoming motorcyclist	
Changing lane across the path of an overtaking motorcyclist	

Comments

Protection of the head of a struck pedestrian or cyclist was predominantly adequate, with a some poor results recorded at the base of the windscreen and on the stiff windscreen pillars. Protection of the pelvis was good at all test locations. Protection of the pelvis was mostly mixed, while that of the femur was good at all test locations. The autonomous emergency braking (AEB) system of the Deepal can respond to vulnerable road users as well as to other vehicles. The system's response both to pedestrians was adequate, while its reaction to cyclists was good. However, the car does not offer protection against 'dooring', where a door is suddenly opened in the path of a cyclist approaching from behind. Performance of the AEB system was good in tests of its response to motorcyclists.

Approaching a stationary car		
Approaching a slower moving car		
Approaching a braking car		

Currently not tested

 SAFETY ASSIST

Total 12.9 Pts / 71%

Comments

Overall, the performance of the autonomous emergency braking (AEB) system was good in tests of its reaction to other vehicles, with impacts being avoided in most tests. System performance was marginal in crossing scenarios. A seatbelt reminder system is fitted as standard to the front and rear seats. The car has a direct driver status monitoring system as standard, detecting driver fatigue and several types of distraction. The lane support system gently corrects the vehicle's path if it is drifting out of lane and also intervenes in some more critical situations. The speed assistance system identifies the local speed limit. The driver can choose to allow the limiter to be set automatically by the system.
